Evolphin Zoom Archiving with Cloudian HyperStore

Evolphin Zoom enables users to seamlessly create and manage their videos and digital media assets. From Zoom, our customers store files in Cloudian HyperStore to free up near line storage and bandwidth, and easily find and restore archived assets.

- **Archive any type of file**, including hi-res videos and video proxies, to Cloudian HyperStore
- **Set retention policies** to enable automatic archive of content
- **Faster uploads and downloads** with support for multi-part uploads to Cloudian HyperStore
- **Search archived files**, see thumbnails of archived content, and execute restore parameters and workflows from within the Zoom Asset Browser
- **Support for multiple root buckets**; separate brands within a company can have independent object storage policies and rules
